

Storr Tractor Company

ANNUAL SPRAYER SERVICE

In order to help prevent downtime, chemical waste and to keep your sprayer running as efficiently as possible, we at Storr Tractor would like to take the opportunity this year to offer a pre-season sprayer check up. This service would be performed at our facility (*pick up and delivery included.*) Call us to set up a pick up time so that we can get your machine back to you as soon as possible. Price schedules and details are included on the back.

New for this season:

We are including a calibration only option which can be performed at your facility. This includes calibrating the speed sensor, flow meter and performing a catch test. We suggest this be done with new nozzles which either you can supply or we can provide at an additional cost. There is an additional charge if repairs need to be done to perform the calibration. The cost is \$875+tax. Please contact us for additional information.

Sprayers are to be sent to us with no chemical in the tank. Any sprayer sent to us with an abundance of chemical in the tank will be returned to you, prior to any work being done, to have the chemical removed. There will be a \$150.00 transportation fee added to the final invoice.

PROGRAM DETAILS

- Flush and clean machine.
- Send Raven controller and flow meter back to Raven Industries for testing and calibration if applicable (*older Raven flow meters for MP1 100/5200/5500 sprayers are no longer supported by Raven.*)
- Rebuild chemical pump (*does not include rebuilding lower end of diaphragm style pumps.*)
- Replace suction and pressure dampener diaphragms for units with two diaphragm pumps.
- Clean, inspect and reseal boom valve sections.
- Replace nozzles.
- Replace nozzle check valve diaphragms.
- Evaluate machine for other needed repairs.
- Calibrate spray system.
- Winterize spray system.
- Provide estimate for all other needed repairs.
